

# The Zero Waste Cities Certification

Introduction for ZWNW and Derry & Strabane Council

[zerowasteurope.eu](http://zerowasteurope.eu)

# Background & context

- The Zero Waste Cities programme is currently based upon a mentoring & recognition system
- We (Zero Waste Europe) work with nearly 400 municipalities who have committed to, at the very least, 6 of our key zero waste requirements
- The need for a more robust, detailed and legitimate certification came from 2 reasons:
  - In order to avoid greenwashing and the 'watering down' of the zero waste space
  - Championing the best zero waste performers in Europe and creating a system that encourages/attracts further ambition from other European municipalities

## Purpose of the Certification - What we're trying to achieve

- The Zero Waste Cities certification system is **an independent, third party assessment** and certification standard based on the established Zero Waste methodology, designed to **promote and protect the true definition of zero waste** against increased greenwashing and corporate takeover of its meaning
- Some similar certification schemes already exist and are implemented by ZWE members, our plan is to design a system that **harmonises practices** across Europe whilst **maintaining a certain level of flexibility and adaptability** for the local context
- The certification is **part of a process** whereby a municipality can work with ZWE throughout their journey **to ensure their zero waste strategy is effective and impactful**

# How it is going to work - overview

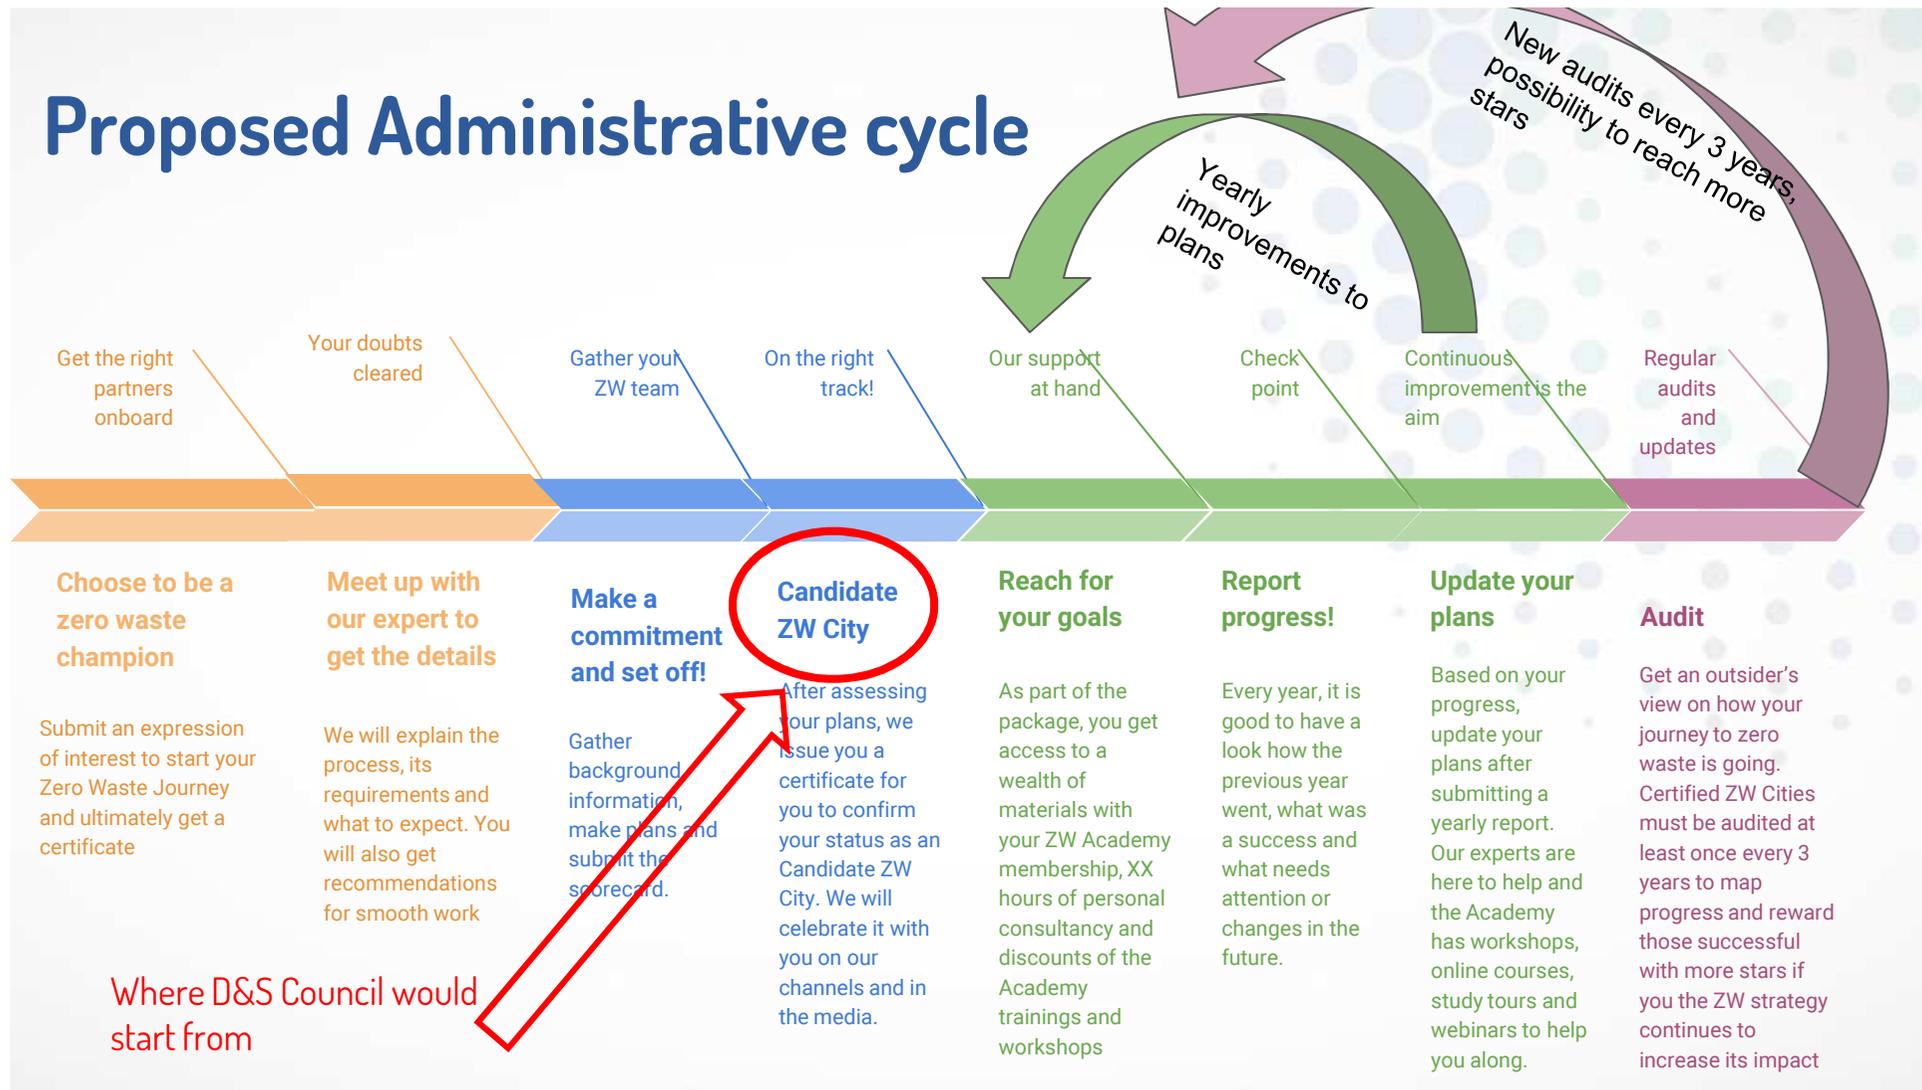

## 2 step certification

# The Cities Certification Scorecard

- There will be a harmonised template scorecard/criteria that will be used by all municipalities (different versions in different languages though)
- The scorecard includes a mix of mandatory and points-based criteria
  - Mandatory criteria forms the minimum requirements of a zero waste city
  - Points-based criteria will be scored depending on the ambition and impact of each policy. The combination of these points together will decide the level of certification a municipality receives
- Supporting documents and templates will be provided (E.G. yearly reporting and waste composition assessments)
- Only available in English, Spanish and Italian currently - will work to get translated versions ready as soon as we can

# Proposed Administrative cycle

## Characteristics of a Zero Waste Certified City

**Curiosity** to challenge accepted norms and behaviour, to see where new policies and ideas can take a community

**Courage** to break from traditional thinking and begin to take those decisive first steps on their path to zero waste

**Confidence** in the support and expertise provided by the ZWE network

## Benefits of certification (1)

- Once a Candidate ZW City, municipalities will be given **greater access to zero waste expertise**, helping to ensure your plans are effective & impactful
- In many contexts, **zero waste strategies can immediately save costs** and continue doing so for years (lower gate fees, more recycling revenue, thriving local economy)
- **Environmental & health reasons** - directly helping to reduce pollution & emissions
- Certification is just one part of a longer journey where municipalities will be **continually supported** to design, implement, monitor and optimise their zero waste strategies

## Benefits of certification (2)

- Access to several **opportunities to showcase a municipality's work** to a European and global audience, positive image and to be seen as a leader on this issue for the municipality (Webinars, Study Tours etc)
- **Compliance with current EU requirements**, future trends point towards more ambitious goals being set by Brussels... therefore there is an opportunity to get ahead of the curve (also related to saving costs!)
- The fee paid by municipalities will go directly to helping fund zero waste work across Europe, therefore **playing a further role in supporting Europe's transition**
- **Positive image** for the town/city or even political status, together with the **credibility** such a certification will have

# Supporting role played by the Mission Zero Academy

- The Academy will be a **connection point** between municipalities and different solutions and services to further accelerate the fulfillment of the Zero Waste commitments
- It will also provide **training and educational materials** to help keeping the municipality officials' knowledge up to date in an easy way
- The Academy will **provide tools**, such as a CO<sub>2</sub> calculator to make evaluating the efficiency of the actions easy and to provide tangible data to track progress and support planning
- It will celebrate the achievements of the municipalities and **provide recognition** for a job well done in its communications and provide possibilities to network with other municipalities

Part of the journey towards certification - 'how a certification becomes more than just a certificate'

# Current stage: Piloting the Certification

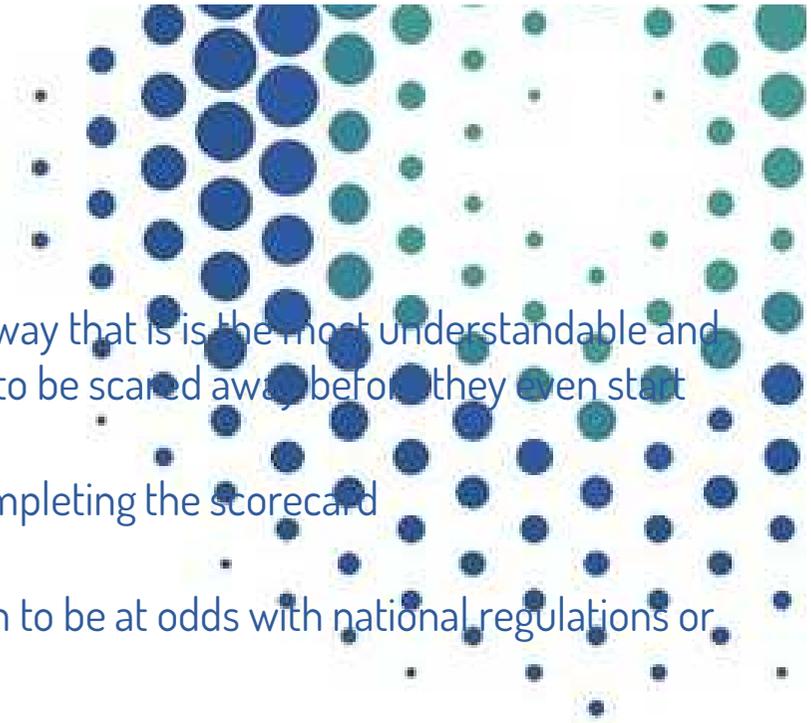

[zerowasteurope.eu](http://zerowasteurope.eu)

## Purpose of the testing & piloting phase

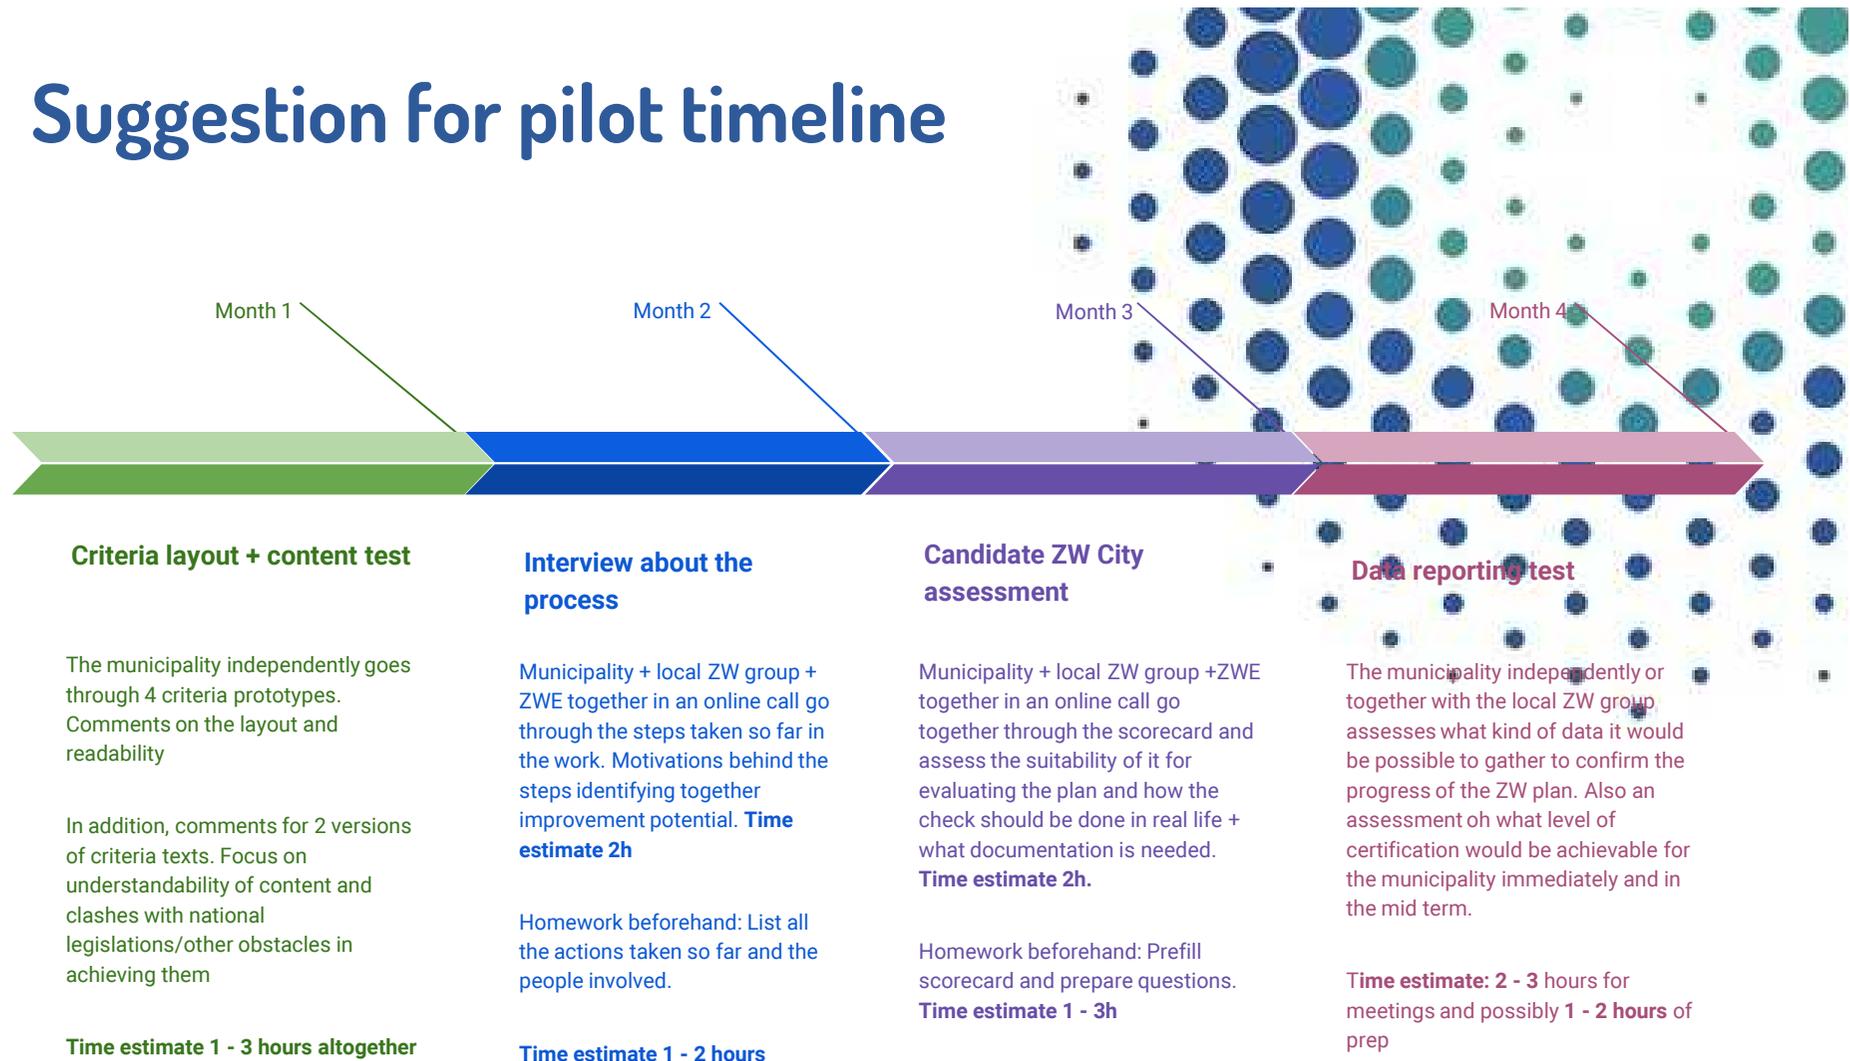

- To ensure that the certification is **strong and verified through robust testing** with different municipalities in a wide range of European contexts
- To **receive feedback on the key processes/aspects** of the certification
  - Structure & language of criteria, points system, auditing/reporting and fee structure
- To see how Europe's best performing municipalities score with the points system
- To understand more about the process from the viewpoint of a municipality, **so that we can design the system to be as accessible, smooth and performance enhancing as possible**
- To help us prepare the right supporting documents to guide municipalities through each stage of the certification

# What do we want to test?

- **The layout of the criteria**
  - We want to find out how to organize the criteria in a way that is the most understandable and least scary for the municipality. We don't want them to be scared away before they even start
- **The language of the criteria**
  - To avoid confusion and misunderstandings when completing the scorecard
- **The suitability of the criteria**
  - To make sure that the criteria is not or does not seem to be at odds with national regulations or policies.
- **The process of becoming a certified ZW City**
  - To be able to communicate and market the certification correctly
  - Basis to develop other supporting materials
- **What activities & services should the Academy provide**
  - What would be most beneficial for a municipality?

# Suggestion for pilot timeline

## Criteria layout + content test

The municipality independently goes through 4 criteria prototypes. Comments on the layout and readability

In addition, comments for 2 versions of criteria texts. Focus on understandability of content and clashes with national legislations/other obstacles in achieving them

**Time estimate 1 - 3 hours altogether**

## Interview about the process

Municipality + local ZW group + ZWE together in an online call go through the steps taken so far in the work. Motivations behind the steps identifying together improvement potential. **Time estimate 2h**

Homework beforehand: List all the actions taken so far and the people involved.

**Time estimate 1 - 2 hours**

## Candidate ZW City assessment

Municipality + local ZW group +ZWE together in an online call go together through the scorecard and assess the suitability of it for evaluating the plan and how the check should be done in real life + what documentation is needed. **Time estimate 2h.**

Homework beforehand: Prefill scorecard and prepare questions. **Time estimate 1 - 3h**

## Data reporting test

The municipality independently or together with the local ZW group assesses what kind of data it would be possible to gather to confirm the progress of the ZW plan. Also an assessment of what level of certification would be achievable for the municipality immediately and in the mid term.

**Time estimate: 2 - 3 hours for meetings and possibly 1 - 2 hours of prep**
